ABOUT

Three years of focused learning and hands-on project building have given me the confidence to contribute value in any digital-focused environment, regardless of the tech stack or tools. My journey began with online platforms like Codecademy and freeCodeCamp, where I explored Ruby, JavaScript, and Responsive Web Design.

I later joined 1337, a high-quality peer-learning program, where I completed 24 challenging projects—solo and team-based—across various domains, including Full-Stack Web Development, OOP, Algorithms, Multithreading, Unix Systems, Virtualization, Gaming, and DevOps.

This experience taught me how to independently learn, adapt, and deliver in real-world scenarios with people from diverse backgrounds. Some of my projects are listed below.

EXPERIENCE

LIADTECH, Casablanca (*Remote*) — Full-stack internship.

May 2025 - Jun 2025

- **Developed** web application solutions for both clients and the company using the MERN/PERN stack.
- **Collaborated** with a team on two significant projects: a marketing agency website and a healthcare application, utilizing Azure and Git for version control.
- **Gained** hands-on experience with advanced Git branching strategies and effectively resolving merge conflicts when integrating changes from the development branch.
- **Utilized** a comprehensive tech stack including JavaScript/TypeScript, React.js, Next.js, Node.js/Express.js, Prisma, Mongoose, and Tailwind CSS.
- **Successfully** completed a 40-day intensive internship.

PROJECT

HealthCare-App (Team) — A Full-stack Web Development Project

- **Contributed** to the development of a comprehensive healthcare application by designing and implementing the **pregnancy tracking module** and by collaborating on fixing issues based on tasks assigned by the technical lead.
- **Collaborated** with eight teammates by dividing the project into individual modules, using Git and Azure for version control and task coordination.
- **Followed** a Git workflow where each team member worked on their branch, regularly pulled updates from the **development** branch, resolved conflicts, and submitted pull requests for review and approval by the tech lead.
- **Built** a consistent and user-friendly interface using **Next.js** and **Tailwind CSS**, ensuring smooth user interaction and efficient data handling.
- **Technologies:** JavaScript/TypeScript, PostgreSQL, Node.js, Express.js, Prisma ORM, Next.js, Tailwind CSS.

Marketing-agency (Team) — A Front-end Web Development Project

- **Developed** the frontend of a marketing agency platform inspired by an existing reference [website](#) using Next.js.
- **Implemented** visually consistent UI components using CSS and Tailwind CSS to match the target design.
- **Collaborated** with two teammates by dividing the project into individual pages and coordinating development through GitHub version control.
- **Technologies:** Next.js, CSS, and Tailwind.

Transcendence (Team) — A Full-stack Web Development Project

- **Developed** the entire front-end of a Pong game platform from the ground up using Vanilla JS.
- **Implemented** a responsive UI with HTML, CSS, and Bootstrap to ensure a smooth user experience.
- **Collaborated** effectively with four teammates on various aspects of the project using Git & GitHub.
- **Technologies:** JavaScript (Vanilla JS), HTML, CSS, Bootstrap.

Webserv (Team) — Building an Nginx-like web server with C++

- **Engineered** a custom web server in C++ inspired by Nginx, demonstrating comprehensive knowledge of HTTP protocols, server architecture, and socket programming.
- **Implemented** the crucial POST method, including support for binary data, chunked transfer encoding, and multipart boundaries.
- **Developed** robust parsing logic for client requests to ensure accurate processing and server responses.
- **Technologies:** C++, Socket Programming.

Inception (Solo)— *A System Administration project*

- **Designed** a dynamic WordPress Web Application utilizing Docker containers.
- **Created** custom Dockerfiles for building each container from scratch, adhering to the project's strict requirement of not using pre-built Docker Hub images.
- **Configured** Nginx as the primary web server and MariaDB for efficient database management, ensuring seamless deployment and scalability of the application.
- **Technologies:** Docker, Nginx, MariaDB, WordPress.

MiniShell (Team)— *Parsing & Input Handling*

- **Designed** and **implemented** the input parsing system for a custom Unix shell in C.
- **Responsible** for converting raw user input into structured command data, including command names, arguments, redirections, and pipelines.
- **Developed** robust redirection handling logic (e.g., `<`, `>`, `>>`, `<<`), including dynamic here-document support.
- **Ensured** correct file descriptor behavior and secure input flow within the shell environment.
- **Technologies:** C, Unix Shell Scripting.

Additional curriculum and personal projects are available on my [GitHub](#) repositories.

EDUCATION

42 Pool and 42 Coursus, Benguerir— 1337 Coding School, UM6P | Jun 2022 - Current

Bachelor of Fundamental Studies in Management, Fes— USMBA | Sep 2015 - Jul 2020

Bac SVT, Fes— Youssef Bin Tachafine High School | Sep 2011 - Jun 2015

CERTIFICATIONS

- **Learn Node.js Course** — Codecademy
- **Front End Development Libraries** — freeCodeCamp
- **Learn React Course** — Codecademy
- **JavaScript Algorithms and Data Structures** — freeCodeCamp
- **Learn Intermediate JavaScript Course** — Codecademy
- **Learn Bootstrap Course** — Codecademy
- **ALX AICE - AI Career Essentials** — ALX_AFRICA
- **Responsive Web Design**— freeCodeCamp
- **ALX PF - Professional foundations** — ALX_AFRICA

SKILLS

- **Frontend development:** HTML, CSS, JavaScript, Bootstrap, React.js, Next.js, Tailwind, Responsive web design.
- **Backend development:** Node.js, Express.js, Postgres, Prisma, mongoDB, mongoose.
- **Software Development:** C, C++, Object-Oriented Programming (OOP), Make
- **DevOps & Tools:** Docker, Virtualization, Google Workspace, Shell Commands
